

Estate Insurance Group Retail and Commercial Property Insurance

"Through the work we have done with Bio-Medical Computing we have managed to create a system that allows effective management of our business with over 3000 clients and 11,000 properties. The system is flexible and responds to the user whenever we require it to do something different. We could not survive without it and it now forms a principle part of the business."

Nick Sellick
Managing Director

The Brief

Estate Insurance Group (EIG) required a system to issue and manage insurance products for retail and commercial property landlords. The system had to generate quotations, invoices and Insurance certificates dependent upon cover required. In addition the system needed to manage subsequent renewals and all aspects of management accounting including paperless document management.

The Solution

We created a network ready Microsoft Access database application with a SQL Server database with the following features:

- Multiple client and property management
- Quotation generation with subsequent issue of invoices and certificates
- Payment recording and full bordereaux reporting to underwriters and FSA compliance
- Included in ISO 9001 certification
- Automatic generation of cover renewal
- Scanned document search and retrieval
- Full management reporting
- One touch client position analysis

The Conclusion

We created a network ready Microsoft Access database application with a SQL Server database with the following features:

- Multiple client and property management
- Quotation generation with subsequent issue of invoices and certificates
- Payment recording and full bordereaux reporting to underwriters and FSA compliance
- Included in ISO 9001 certification
- Automatic generation of cover renewal
- Scanned document search and retrieval
- Full management reporting
- One touch client position analysis
